The Digital Output Center: Print Prices Spring 2015

To calculate the price of a print:

1.) Figure out the size of your print in inches, then calculate ink cost:
(Length in inches) x (Width in Inches) x (cost per in2) = Price for ink
2.) Figure out type and amount of paper you will use, take prices from chart or bring your own paper (no charge)
3.) Add ink price and paper price to get total cost of the print

Example Ink Prices:
(EDM / DIAP / Photo)

3880 (Front Room)

Size	Price
8.5" x 11"	$1.87
11" x 16.5"	$3.63
